What is a URL? - Learn web development | MDN - MDN Web Docs

Web Feb 23, 2023 · **URL** stands for Uniform Resource Locator. A **URL** is nothing more than the address of a given unique resource on the Web. In theory, each valid **URL** points to a unique resource. Such resources can be an HTML page, a CSS document, an image, etc.

Protocol-rel

A Uniform Resource Locator (URL), colloquially termed a web address, is a reference to a web resource that specifies its location on a computer network and a mechanism for retrieving it. A URL is a specific type of Uniform Resource Identifier (URI), although many people use the two terms interchangeably. URLs occur most commonly to reference web pages (HTTP) but are also used for file transfer (FTP), email (mailto), database access (JDBC), and many other applications.
